

[Handwritten signature]
a first material resistant to oxidation up to about 3.0 Volts vs. SHE,
wherein the catalyst is distributed on the first material, and the composition
composes a fuel cell electrode that is substantially free of carbon fibers.

- [Handwritten signature]*
21. (Twice Amended) A composition, comprising:
a catalyst capable of catalyzing oxidation of a fuel cell gas;
a first material resistant to oxidation up to about 3.0 Volts vs. SHE; and
a binder comprising a fluorine-containing non- electrolytic material, the binder
containing the first material and the catalyst,
wherein the catalyst is distributed on the first material, and the composition
composes a fuel cell electrode that is substantially free of carbon fibers.--
